Targeted Lung Health Check Programme

Get an MOT for your lungs and give yourself some peace of mind.

The Targeted Lung Health Check Programme aims to provide people with an opportunity to catch any signs of lung conditions including cancer early on. Often the checks turn up clear, however, if the team do find anything concerning, it will be caught earlier, giving us more options for treatment and an improved outcome for patients.

Michael, 69, from Lancashire had his check and said, "The whole process was easy and straightforward and was an excellent way of obtaining what could be life-saving information. I would recommend anyone who is offered the Lung Health Check to take it... it gave me considerable peace of mind."
